WORKING PAPER

Credit Rating and Corporate Disclosure: Evidence from Sovereign Credit Downgrades (with Wensi Xie)

“Using sovereign credit ceiling rule as a quasi-natural experiment, I find the effect of credit rating change on corporate disclosure. Specifically, I find evidence of market frictions induced by the sovereign credit ceiling rule, and that affected firms face a higher cost of debt post-downgrade. In response, affected firms increase the frequency and the timeliness of voluntary disclosure. The effect is more profound when affected firms are more external finance dependent, and are covered by fewer financial analysts. My finding suggests that firms actively contribute to the information environment when the credit ratings deviate from firm fundamentals and capital market fails to recognize the nature of the credit downgrades.”
